

Deep Groove Ball Bearing Finder — 6000, 6200, 6300 Series by Bore, Outside Diameter, Width and Seal Variant (2RS, 2Z, Open)

cBallast Technical Sourcing · generated 2026-09-29 · cballast.com/documents/deep-groove-ball-bearing-finder-6000-6200-6300-series-bore-outside-diameter-width-seals · first 500 rows; the full table is online

Deep groove ball bearings are identified by the ISO designation (6000 extra-light, 6200 light, 6300 medium, 6400 heavy series; the last two digits × 5 give the bore in mm from 04 upwards) and by suffixes: 2RS/2RSH/2RS1 (two rubber contact seals), 2Z/ZZ (two steel shields), open (no seal), C3 (increased radial clearance for higher temperature or interference fits) and E (reinforced). The finder lists the catalogue bearings with bore d × outside diameter D × width B so a replacement can be selected from dimensions alone when the marking is unreadable.

Section	Designation	d × D × B (mm)	Seal / variant	Part number	Brand
