Flange Bolt and Fine-Thread Hexagon Bolt Finder

Two families sit outside the plain DIN 931/933 series. Hexagon flange screws to DIN 6921 (EN 1665) have an integral washer face that spreads the bearing pressure and, in the serrated form, resists loosening without a separate lock washer; they are common on machine covers, guards and vehicle assemblies. Fine-pitch hexagon bolts to DIN 960 (part thread) and DIN 961 (full thread), or ISO 8765 and ISO 8676, use a reduced pitch (M8 × 1, M10 × 1.25, M12 × 1.5, M16 × 1.5, M20 × 1.5) for higher preload per turn, thinner walls and vibration-prone joints. The finder lists both families by thread, pitch and length with one column per material and finish.

Fine-pitch bolts need fine-pitch nuts (DIN 934 / ISO 8673 with the same pitch); a coarse nut will not start. Flange screws are matched with flange nuts DIN 6923 / ISO 4161 of the same serration type. Serrated flanges are intended for steel or hard surfaces; on aluminium or painted parts use the plain-flange form to avoid damaging the surface.
