Norwegian installation cables are specified by a type code that fixes insulation, sheath and screen: PFSP (PVC insulated, PVC sheathed, with concentric copper screen, 1 kV, the standard for fixed installation in buildings), PFXP (PVC/PEX, unscreened, 1 kV), IFSI and IFXI (halogen-free equivalents of PFSP/PFXP, 1 kV, with -EMC variants for drives), TFXP (aluminium conductor, 1 kV distribution), EXQ and IFLI (halogen-free indoor cables, 500 V), PR / PR Pluss (flat PVC installation cable, 500 V) and TFSP (PVC, aluminium). The conductor count and cross-section (3G2.5 = three conductors including protective earth, 2.5 mm²; 4X95/50 = four 95 mm² conductors with a 50 mm² screen) complete the designation. The finder lists the catalogue by type family and conductors × mm² with the rated voltage and conductor material so drums of the right construction can be quoted.
