Timing pulleys are defined by tooth profile and pitch (HTD 3M, 5M, 8M, 14M curvilinear; T5, T10, AT5, AT10 trapezoidal metric; MXL, XL, L, H, XH inch; GT/PowerGrip variants), number of teeth and belt width. The pitch diameter follows from $\text{teeth} \times \text{pitch} \div \pi$ so the ratio of a drive is the tooth ratio. SKF designations read PHP 40-14M-40TB: 40 teeth, 14M pitch, 40 mm belt width, taper-bush mounting; inch pulleys state width in hundredths of an inch (PHP 19L050 = 19 teeth, L pitch, 0.50 in). The finder lists the catalogue by pitch, teeth and width so a pulley can be matched to an existing belt.
