

Greenpipe Snipp & Snapp® Panzar

Sub-sea cables are exposed to very rough conditions such as currents, stony seabed, sea traffic and salts. Greenpipe Snipp & Snapp® Panzar was developed in close cooperation with submarine cable entrepreneurs and divers. The pipes can be installed quickly, both in sub-sea applications as well as above water. The Greenpipe Uni Weight™ is used to complement the protection pipes to fix the cables to the seabed in flowing waters.

- Quick and easy installation without tools.
- Good working environment for installers.
- Made of 100 % high quality recycled PP-EPDM plastic.
- Up to 80 % environmental savings compared to virgin material.
- Connecting sleeves securing lengthwise connection between the pipes.
- Locking clamps and hinges prevent the halves from separating from each other.
- Mechanical properties tested according to ISO 9969:216 and EN 61386:24.

Greenpipe Uni Weight*

Weight (kg)	Length (cm)	Pieces/ EU pallet	Article No
12	60	72	10501
18 (standard)	90	48	10502

*Available in smaller or heavier weight
