The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804. For further information about comparability, see EN 15804 and ISO 14025.

### Name and contact information of LCA practitioners:

Esalex srl - [info@esalex.eu](mailto:info@esalex.eu)

## Company information

Owner of the EPD: Eurostandard S.p.A.

Contact: Maurizio Tiso, email: [maurizio.tiso@eurostandard.it](mailto:maurizio.tiso@eurostandard.it)

Description of the organisation: Eurostandard S.p.A. carries out moulding of plastic materials for the production of polyethylene and polypropylene fittings, used in gas and water distribution networks, in fire-fighting and water treatment systems.

The Company was founded in the 1965 for the production of high density polyethylene crates and since 1984 has converted its production into polyethylene fittings for pressure pipelines. The production plant is located in Tesero, in Val di Fiemme, in the hearth of the Dolomites. All production is highly automated and equipped with robot and complex machineries. Eurostandard S.p.A. is certified ISO 9001:2015 (certificate n. 21071/10/S), ISO 14001:2015 (certificate n. EMS-2935/S), ISO 45001:2018 (certificate n. OHS-3876). The company has an accredited laboratory for the product quality control (n.0740L).

## Product information

Product name: Buttfusion fitting

Product description and identification: the fittings are made of polyethylene injection moulded with long collar. The polyethylene compounds used are added at the origin with carbon black for UV stabilization, are suitable for drinking water and foodstuffs (conformity to Italian law DM 21st March 1973 and the DM n. 174 dated 6th April 2004). The product (cod. 20.47) can have a flange in steel included.

The products included in the LCA study are:

- Elbow/bends
  - Elbows 90° (cod. 20.10)
  - Elbow 45° (cod. 20.15)
  - Segmented bend 90° (cod. 20.12)
  - Segmented bend 45° (cod. 20.17)
- Tee
  - TE 90° (cod. 20.20)
  - 90° Reduced Tee moulded (cod. 20.21A)
  - 90° Reduced Tee assembled (cod 20.21B)
- Other forms
  - Stub end (cod. 20.30)
  - Stub end for butterfly valve (cod. 20.34)
  - Stub end/PP flange system (cod. 20.47B)
  - Cap (cod. 20.35)
  - Reducer (cod. 20.50)

UN CPC code: 36320

Geographical scope: International

#### Technical specification:

The technical features of the products are:

| FEATURES                             | Typical values         | Unit              | Methods test |
|--------------------------------------|------------------------|-------------------|--------------|
| Density                              | 958 - 959              | kg/m <sup>3</sup> | ISO 1183-1   |
| Melt mass-flow rate (MFR) 5 kg/190°C | 0,23 - 0,45            | g/10 min          | ISO 1133-1   |
| Tensile strength at yield            | 23 - 25                | MPa               | ISO 527      |
| Tensile elongation at break          | ≥ 350                  | %                 | ISO 527      |
| Carbon black content                 | 2,0 - 2,5              | %                 | ISO 6964     |
| Linear thermal expansion coefficient | 2,0 x 10 <sup>-4</sup> | m/m °C            |              |
| Temperature of brittleness           | - 80                   | °C                | ASTM D746    |

The Eurostandard fittings are constantly monitored throughout the production process in accordance with the provisions of the internal self-control plans derived from UNI EN 1555, UNI EN 12201 and UNI UN ISO 15494 standard for fittings.

The test activities are carried out continuously in full compliance with the standards established by the reference standards and include mechanical and physical tests, performed both on the fittings and on the raw material.

In particular, the production is subjected to the following tests:

- Mass fluidity index (MFR): UNI EN ISO 1133-1
- Dimensional check - Examination of the appearance - Verification of marking - Electric resistance: UNI EN 1555, UNI EN 12201, UNI EN ISO 15494, UNI EN ISO 3126
- Resistance to internal hydrostatic pressure at 20°C AND 80°C: UNI EN ISO 1167
- Traction resistance on buttfusion fittings: ISO 13953
- Oxidation induction time (OIT): ISO 11357-6

The LCA study has been modelled on Eurostandard production data for 2020. The following tables list the products under study and their weight. More technical information for each product can be found on the Eurostandard website ([www.eurostandard.it](http://www.eurostandard.it)).

#### Buttfusion fitting (only polyethylene)

## LCA information

Functional unit: 1 kg of product installed

The products under study are fittings installed in pipes for water or gas distribution network. The study comprises the raw material extraction, raw material transportation, manufacturing, transportation to customer, installation, end-of-life of product.

Reference service life: 50 years

Time representativeness: primary data refer to 2020 year. The generic data has been updated in 2019 (Ecoinvent 3.6).

Database(s) and LCA software used: for the elaboration of data SimaPro v. 9.1.1.7; the database used is Ecoinvent 3.6.

Description of system boundaries: cradle-to-grave (A-B-C) + module D

Excluded lifecycle stages: all life stages are included in the LCA study

More information: [www.eurostandard.it](http://www.eurostandard.it)

System boundary is presented in the flow chart below:

---

Additional information:

- The allocation is applied in the LCA study: when necessary, mass allocation is used.
- Electricity: the Eurostandard supplier mix in the 2020 is used.  
1 kWh = 0,176 Kg CO<sub>2</sub>eq.  
Furthermore, the company generates electricity from a photovoltaic plant and a cogeneration plant (in A1 module).
- Cut-off: at least 95% of the energy and materials used by module has been introduced, as well as 99% of the total use of energy and materials
- The modularity principle, as well as the polluter payer principle have been followed
- The next processes have not been included since its impact is not significant:
  - Environmental impact from infrastructure, construction, production equipment, and tools that are not directly consumed in the production process.
  - Personnel-related impacts, such as transportation to and from work.
- The impact methods used are:
  - EN 15804+A2 v.1.00
  - Cumulative energy demand v. 1.00 for resource use
  - EDIP 2003 v. 1.07 for waste production

The verifier and the program operator do not make any claim nor have any responsibility of the legality of the product.

The estimated impact results are only relative statements which do not indicate the end points of the impact categories, exceeding threshold values, safety margins or risks.

Modules declared, geographical scope, share of specific data (in GWP-GHG indicator) and data variation:

|                      | Product stage                                       |           | Construction process stage |           |                           | Use stage |             |        |             |               |                        |                       | End of life stage          |           |                  |          | Resource recovery stage            |

- Module A1 - Raw material supply: this module includes the extraction of raw material and energy production.
- Module A2 - Transport: this module includes the transportation of raw materials from the suppliers to the Eurostandard gate.
- Module A3 - Manufacturing: this module considers the Eurostandard internal processes, including consumption of resources and packaging. The production process consists in injection moulding of the polyethylene granulate and inclusion of metal parts, when necessary.

- Module A4 - Transport: this module considers the transport of product to construction site.

| Waste materials on the building site, before waste processing, generated by the product's installation; specified by type                                                   | Product losses      | 1%                                                                                                  |
|                                                                                                                                                                             | Cardboard box kg    | 0,098                                                                                               |
|                                                                                                                                                                             | Plastic bag kg      | 0,013                                                                                               |
| Output materials (specified by type) as result of waste processing at the building site e.g. of collection for recycling, for energy recovery, disposal; specified by route | Landfill            | 100% of product packaging (0,013 kg of LDPE and 0,097 kg of cardboard box) and 1% of product losses |

- Module B - Use stage: the product doesn't require any use, maintenance, repair, replacement, refurbishment and it isn't necessary use of energy or water for his use.
- Module C1 - Deconstruction/demolition: The product is uninstalled manually, without the use of energy.
- Module C2 - Transport to waste processing: the product is then transported to disposal; the scenario provides the transport for 50 km.
- Module C3 - Waste processing for reuse, recovery and/or recycling: the product is send to landfill and there isn't any reuse, recovery or recycling.
- Module C4 - Disposal: the product is totally disposed in landfill.

| PARAMETER                                                  | VALUE / DESCRIPTION                                                                          |
|------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| Collection process specified by type                       | The product is uninstalled manually<br>Product waste collected with 3,5-7,5 metric ton truck |
| Recovery system specified by type                          | There is no recovery, recycling or reuse                                                     |
| Disposal specified by type                                 | 100 % Landfill (1 kg)                                                                        |
| Assumptions for scenario development (e.g. transportation) | 3,5-7,5 metric ton truck. Distance: 50 km                                                    |

- Module D - Reuse-Recovery-Recycling potential: Module D calculates the potential environmental benefits of the recycling or reuse of materials. This product has not considerable benefits due to recycling or/and reuse.

## Content information

### Buttfusion fitting (only polyethylene)

| Product components   | Weight, kg | Post-consumer material, weight-% | Renewable material, weight-% |
|----------------------|------------|----------------------------------|------------------------------|
| Polyethylene         | 0,98       | 0                                | 0                            |

[1] The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

The modules B1-B7 have impacts 0.

### Potential environmental impact - additional mandatory and voluntary indicators

| Results per functional unit          |           |          |          |          |          |          |          |          |          |          |
|--------------------------------------|-----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| Indicator                            | Tot.A1-A3 | A4       | A5       | B        | C1       | C2       | C3       | C4       | total    | D        |
| GWP-GHG (kg CO <sub>2</sub> eq.) [2] | 3,95E+00  | 1,75E-01 | 4,55E-02 | 0,00E+00 | 0,00E+00 | 2,68E-02 | 0,00E+00 | 5,15E-03 | 4,20E+00 | 0,00E+00 |

[2] The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus equal to the GWP indicator originally defined in EN 15804:2012+A1:2013.

## Information on biogenic carbon content

### Results per functional unit

| BIOGENIC CARBON CONTENT              | Unit | QUANTITY |
|--------------------------------------|------|----------|
| Biogenic carbon content in product   | kg C | 0        |
| Biogenic carbon content in packaging | kg C | 3,94E-02 |

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO<sub>2</sub>.

[1] The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

The modules B1-B7 have impacts 0.

### Potential environmental impact - additional mandatory and voluntary indicators

| Results per functional unit          |           |          |          |          |          |          |          |          |          |          |
|--------------------------------------|-----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| Indicator                            | Tot.A1-A3 | A4       | A5       | B        | C1       | C2       | C3       | C4       | total    | D        |
| GWP-GHG (kg CO <sub>2</sub> eq.) [2] | 5,10E+00  | 1,67E-01 | 5,65E-02 | 0,00E+00 | 0,00E+00 | 2,68E-02 | 0,00E+00 | 5,15E-03 | 5,35E+00 | 0,00E+00 |

[2] The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus equal to the GWP indicator originally defined in EN 15804:2012+A1:2013.

## Information on biogenic carbon content

### Results per functional unit

| BIOGENIC CARBON CONTENT              | Unit | QUANTITY |
|--------------------------------------|------|----------|
| Biogenic carbon content in product   | kg C | 0        |
| Biogenic carbon content in packaging | kg C | 3,94E-02 |

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO<sub>2</sub>.
