1. Precautions

1-1 Installing the air conditioner

- User should not install the air conditioner by themselves. Ask the dealer or authorized company to install the air conditioner except window-type air conditioner in U.S.A and Canada.
- If you don't install the air conditioner properly, it may cause a fire, a water leakage or an electric shock.
- You must install the air conditioner according to the national wiring regulations and safety regulations.
- Install the indoor unit higher than 2.5m from the floor to avoid injury caused by the operation of the fan. (except the window-type air conditioner)
- The manufacturer is not responsible for any accidents or injury caused by an incorrect installation.
- When installing the built-in type air conditioner, keep all electric cables such as the power cable and the connection cord in pipes, ducts, or cable channels to protect them from the danger of impact or any other incidents.

1-2 Power supply and circuit breaker

- If the power cord of the air conditioner is damaged, it must be replaced by the manufacturer or a qualified person in order to avoid a hazard.
- The air conditioner must be plugged into an independent circuit if applicable or connect the power cable to the auxiliary circuit breaker. An all pole disconnection from the power supply must be incorporated in the fixed wiring with a contact opening of >3mm.
- Do not extend an electric power cord to the air conditioner.
- The air conditioner must be plugged in after you complete the installation.

1-3 During operation

- Do not repair the air conditioner at your discretion. It is recommended to contact a service center directly.
- Never spill any kind of liquid on the air conditioner. If this happens, turn off the air conditioner and contact an authorized service center.
- Do not insert anything between the airflow blades to prevent damage to the inner fan and consequent injury. Keep children away from the air conditioner.
- Do not place any obstacles in front of the air conditioner.
- Do not spray any kind of liquid into the indoor unit. If this happens, turn off the air conditioner and contact a service center.
- Make sure that the air conditioner is well ventilated at all times. Do not place a cloth or other materials over it.
- Remove the batteries if you don't use the remote control for a long time. (If applicable)
- Use the remote control within 7 meters from the indoor unit. (If applicable)

1-4 Disposing of the unit

- Before disposing the air conditioner, remove the batteries from the remote control.
- When you dispose of the air conditioner, consult your dealer. If pipes are removed incorrectly, refrigerant may blow out and cause air pollution. When it contacts with your skin, it can cause skin injury.
- The package of the air conditioner should be recycled or disposed of properly for environmental reasons.

1-5 Others

- Never store or load the air conditioner upside down or sideways to prevent the damage to the compressor.
- Young children or infirm persons should always be supervised when they use the air conditioner.
- Max current is measured according to IEC standard for safety.
- Current is measured according to ISO standard for energy efficiency.

2. Product Specifications

2-1 The Feature of Product

- ◆ **Fast cooling**

If you want strong and cool air, just select Fast function! It will get you the strongest air!

- ◆ **WindFree Cooling**

Use the WindFree Cooling function to enjoy a mild breeze coming through fine holes in the WindFree panel instead of air coming directly through the air outlet.

- ◆ **Eco**

Use the Eco function when you're alone at home. Aside from energy savings from the inverter technology, the Eco Mode will further minimize your energy consumption and reduce your electricity bill by adjusting the maximum operating capacity of the compressor.

- ◆ **Easy Filter**

There is no grille to remove before separating the filter from the air conditioner! Therefore, filter can be cleaned easily and more frequently. Constant filter cleaning will prevent dust from entering the product or accumulating on the filter.

- ◆ **good'sleep function**

good'sleep function will allow you to have deep, good night's sleep by adjusting the temperature, fan speed and air flow direction.

- ◆ **Smart Install**

When the installation is done, your product will examine itself through trial operation to check if it was installed properly.

- ◆ **Easy Installation**

It's so easy to install! An installer can easily hang the product on the wall and connect the pipes and wires by opening the cover on the bottom of the product. No need to tilt the product to connect the pipe and the wires!

3. Alignment and Adjustments

3-1 Test Mode

◆ How to Approach Test Mode

You can approach the test mode by pressing the on/off switch of indoor unit for 5 seconds.

◆ Test mode operation option

After installing the air conditioner, test mode checks if each of the functions below operate normally or not by operating the test mode.

- When an Error occurs, test mode will display the error.
- **Cool Mode:** during Cool Mode testing, the compressor will run continuously. (Cool Mode testing overrides the antifreeze protection of the indoor unit)
- **Up-down louver :** Up-down swing mode
- **Indoor Fan :** Turbo

Note

- Because the test mode will operate the Cool Mode by force, check after completing the installation if each of the functions operate normally and as a last step you need to turn off the power of the air conditioner.

3-2 Display Error and Check Method

3-2-1 Indoor Display Error and Check Method

ERROR MODE	TYPE	DESCRIPTION
7-SEG	INDOOR/ OUTDOOR	
C101, C102	INDOOR	Communication error
C108		Set address error
C121		Indoor unit room (return air) temperature sensor is open/short
C122, C123		INDOOR MID, INDOOR IN EVA-TH sensor error
C140		Dust sensor error
C142		Humidity error
C143		Motion sensor error
C154		Fan error(indoor)
C161		Mixed operation error
C163		Option error
C187		K1 filter feed back error
C665		Drain pump error

Note

If the set doesn't work (No power), check the thermal fuse of terminal block OPEN or SHORT with Multimeter.

* Measure the thermal fuse housing PIN#1~2 : OPEN(disconnection)-> defective product

3-3 Setting Option Setup Method

Example Option code : 13-FC-50-B2-2A-71-E0-07-10-20

Step 1 Enter Service mode

- 1 To enter Service mode hold the MODE button and press downwards TEMP and FAN simultaneously for 6 seconds
- 2 Wait till the screen gets black or will show SW initialization

Step 2 Enter the Option Setup mode.

- 1. Connect the remote control by using the USB port (C-Type) at the bottom of the remote control.
 - 2. Press and hold the  and  button simultaneously for 5 seconds.

(After connecting the remote control, press the  and  button within 10 seconds.)
 - 3. Make sure the remote control display shown as 
- * When setting the option code, press the next button within 5 seconds so that the setting is not interrupted.

Step 3 Enter the Option Setup mode.

	1 Setting SEG 1 Press the  button to set the display panel to 1. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	
	2 Setting SEG 2 Press the  button to set the display panel to 3. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	
	3 Press the  button to set next options.	
	4 Setting SEG 3 Press the  button to set the display panel to F. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	
	5 Setting SEG 4 Press the  button to set the display panel to C. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	

Step 3 Enter the Option Setup mode.

6 Press the  button to set next options.

7 Setting SEG 5

Press the  button to set the display panel to 5.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

8 Setting SEG 6

Press the  button to set the display panel to 0.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

9 Press the  button to set next options.

10 Setting SEG 7

Press the  button to set the display panel to B.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

11 Setting SEG 8

Press the  button to set the display panel to 2.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

12 Press the  button to set next options.

13 Setting SEG 9

Press the  button to set the display panel to 2.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

14 Setting SEG 10

Press the  button to set the display panel to A.

Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.

50

B2

2A

Step 3 Enter the Option Setup mode.

	15 Press the button to set next options. 16 Setting SEG 11 Press the button to set the display panel to 7. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly. 17 Setting SEG 12 Press the button to set the display panel to 1. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	71
	18 Press the button to set next options. 19 Setting SEG 13 Press the button to set the display panel to E. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly. 20 Setting SEG 14 Press the button to set the display panel to 0. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly. 21 Press the button to set next options. 22 Setting SEG 15 Press the button to set the display panel to 0. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly. 23 Setting SEG 16 Press the button to set the display panel to 7. Every time you press the button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	E0 07

Step 3 Enter the Option Setup mode.

	24 Press the  button to set next options.	10
	25 Setting SEG 17 Press the  button to set the display panel to 1. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	
	26 Setting SEG 18 Press the  button to set the display panel to 0. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	
	27 Press the  button to set next options.	
	28 Setting SEG 19 Press the  button to set the display panel to 2. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	20
	29 Setting SEG 20 Press the  button to set the display panel to 0. Every time you press the  button, the display panel reads 0 → 1 → 2 → 3 → ... 9 → A → B → C → D → E → F repeatedly.	

Step 4 Upon completion of the selection, check you made right selections.

Press the  button to set the display part and check the display part.

→ The display part shows like below when each time you press the  button.

Step 5 Press the  button.

When pressing the operation  button with the direction of remote control for the sound “Ding” or “Diriring” is heard, then the input of option is completed. (If the deriving sound isn’t heard, try again pressing the  button.

Step 6 Press  button after 5 second and check whether the option code is set properly.

Option code :

Model	Option code	
	General	Install
AR70F09CABW/EE	011A05-19C0F7-271920-37164A	024002-100150-200361-300346

4. Disassembly and Reassembly

◆ Necessary Tools

Item	Remark
Crosshead SCREW DRIVER Q'ty 1 ea. To assemble and disassemble the screws	
MONKEY SPANNER Q'ty 1 ea. To assemble and disassemble the fan motor and compressor	
Flat head SCREW DRIVER Q'ty 1 ea. To assemble and disassemble the screws	

4-1. Indoor Unit

NO.	Parts	Procedure	Remark
1	FRONT-PANEL	1) Stop the driving of air conditioner and shut off main power supply. 2) Detach PRE FILTER from the PANEL FRONT. 3) The COVER PANEL is fixed to body by hooks in center and side area. 4) Separate the hook pulling the end of the COVER PANEL as shown in figures.(Watch out for damaging the hooks)	     

NO.	Parts	Procedure	Remark
1	FRONT-PANEL	⚠ Caution: Be cautious with the assembly of the Cover Panel after the end of service. - Place back the front panel with both hands and please be careful not to damage the piping or drain hose in the process. - Please check if all the panel hooks are in the holes of the main frame before pushing the front panel. ⚠ Caution: - To assemble push side hooks - To assemble push all of the 5 center hooks	      

NO.	Parts	Procedure	Remark
1	FRONT-PANEL	5) The INLET GRILLE is fixed to body by hooks in the center and side area. 6) Separate the hook by pulling end of the INLET GRILLE as shown in figures.(Watch out for the damage of hooks) 7) To remove the FRONT PANEL from the main frame, remove 2 screws at the bottom. (use (+) Screw Driver) 8) To remove the FRONT PANEL from the main frame, loosen 4 hook structures. When separating the hooks: pull out each ribs near the hooks as shown in figures. (Watch out for damaging the hooks)	      

NO.	Parts	Procedure	Remark
1	FRONT PANEL	9)Raise the FRONT PANEL upward as shown in the figure to separate the 3 hooks.	 
2	CONTROL-CASE	10)To open the INDOOR-PBA cover, raise the side flanges of the PLATE-RIGHT at an angle and unlock 2 hooks. 11)Separate Fan Motor wire as shown in figures.	   

NO.	Parts	Procedure	Remark
2	CONTROL-CASE	14)Unfasten the screw of the Ground wire and take out Temperature wires from ASSY EVAP. (Use (+) Screw Driver.) 15) The CONTROL-CASE is fixed to the PIPE HOLDER by a hook at the bottom of the case as shown on the image on the right. (Please loosen remaining connectors before detaching CONTROL-CASE. ⚠ Caution: When you want to unplug the connector, press the connector to unlock 16) Push up the hook of the PIPE-HOLDER at bottom and lean on the CONTROL-CASE as shown on the image.	     

NO.	Parts	Procedure	Remark
3	DRAIN TRAY	17) To detach the DRAIN TRAY from the main frame, pull the bottom of the DRAIN TRAY towards you as can be seen on the images on the right.	
		18) Pull out the Drain Hose.	  

NO.	Parts	Procedure	Remark
4	EVAPORATOR	19) The PIPE HOLDER is fixed to body by 2 hooks as shown in the figure. 20) To detach the PIPE-HOLDER from the main frame, loosen the 2 hooks with a screwdriver. When separating the hooks: Use the (-) flat head screw driver and insert the screw driver into the gap of the hooks and slowly separate each hook by pivoting the screw driver towards the motor side. 21)Remove the PIPE HOLDER. 22)Unfasten the screw of the Fan Motor side. (Use (+) Screw Driver.) 23)Unfasten 2 screws of the opposite side of the Fan Motor. (Use (+) Screw Driver.)	    

NO.	Parts	Procedure	Remark
4	EVAPORATOR	24) Pull up the EVAPORATOR of the opposite side of the Fan Motor 25) loosen the hook of the Fan Motor side. 26) Pull up the EVAPORATOR towards to you.	     

NO.	Parts	Procedure	Remark
5	FAN MOTOR & CROSS FAN	27) Unfasten the screw on the COVER Motor. (Use (+) Screw Driver.) 28) Unwind the Motor Wire. 29) Remove the MOTOR COVER 30) Unfasten the screw of the CROSS FAN a little. (Use (+) Screw Driver.) 31) Raise up the CROSS FAN on the left side and pull out from the Motor.	     

4-3. Outdoor Unit (N-SI)

NO.	Parts	Procedure	Remark
1	Common work	1) Loosen the screws and detach the cabi Top cover.	
		2) Loosen screws of the cabi front and detach it.	 

NO.	Parts	Procedure	Remark
		3) Remove the 4 Cond Bar from the holder of outdoor unit cabinet. * This process is supported by heating models only	
		4) Loosen ing screws from the Cabi Front Lh and detach it. 5) Loosen ng screws from the Cabi Side Rh and detach it.	  

NO.	Parts	Procedure	Remark
2	Fan & Motor	1) Detach the Nut Flange like the picture on the right side. (Turn clockwise because the screw is left-handed.) (Use Monkey Spanner.)	
		2) Detach the Fan Propeller. 3) Loosen 4 fixing screws to detach the Motor. (Use Monkey Spanner.) 4) Disconnect the wire between Ass'y Control Out and Motor.	 
		5) Loosen fixing bolts and detach the Bracket Motor	

NO.	Parts	Procedure	Remark
3	Assy Control Out	1) To remove the Cover control box : Pull the motor wire to allow sufficient space as shown on the right side and then remove the screw. 2) Detach several connectors from the Assy Control Out. 3) Detach several connectors from the PCB of Assy Control Out. 1) Release the refrigerant at first. 2) Loosen ng screw on both sides. 3) Disassemble the pipes in both inlet and outlet with welding torch. 4) Detach the Heat Exchanger.	   

NO.	Parts	Procedure	Remark
5	Compressor	1) Loosen the ng nut and detach the Compressor Lead Wire. (Use Monkey Spanner.) 2) Loosen the bolts at the bottom of Compressor like the picture on the right side. (Use Monkey Spanner.)

7-4 Wire connecting the indoor unit terminal blocks

1. Terminal press of Ring terminal shall be set facing up before connecting wire.

Is inverted

Terminal has been cut.

2. There shall be no empty space between Ring terminal and Screw after Clamp.

If not, there exists a possibility of fire which can be caused by electric heat in the connecting part.

①

②

③

④

⑤

⑥

①, ② : Good

③ Bad : Ring terminal is connected reversely

④ Bad : Not clamped Screw

⑤ Bad : In the gap between Ring terminal & Screw

⑥ Bad : Unused Ring Terminal

8. Operating Instructions

8-1 Name of Each Part

8-1-1 Indoor Unit

The design and shape are subject to change according to the model.

◆ Main Parts

- | | |
|--------------------------------|---|
| 01 Air intake | 05 Airflow blade (left and right) |
| 02 Air filter | 06 Power button/Remote control receiver |
| 03 WindFree panel | 07 Room temperature sensor |
| 04 Airflow blade (up and down) | 08 Display |

◆ Display

- 01 Temperature indicator (numeric)
Filter reset indicator (⌂ F)
Electricity consumption indicator (numeric)
Auto clean indicator (⌂ !)
Defrost indicator (dF)

02 AI Energy indicator

03 AI Auto indicator

04 Timer indicator
good'sleep indicator

05 Wi-Fi indicator

NOTE

- When the Wi-Fi is turned on, the indicator blinks three times and then turn on.

8-2 Wireless Remote control-Buttons and Display

DB96-25924T

01 Display

02 Button

NOTE

- Features may differ depending on models.
- Although WindFree, Motion detection, Freeze Wash and Heating Range is displayed on the remote control display, it is not available on this model.

Functions and Buttons

Function	Button and Selection	Display
Power On/Off

Good sleep	In Cool or Heat mode ►  ►  ► Select Timer/Good sleep. ►  ►  ► Select Good sleep. ►   (Set the duration.) ► 	

Charging the remote control

- Fully charge the remote control before use.
- If “Low battery” appears on the remote control display, charge the remote control by using the USB port (C-Type) at the bottom of the remote control. If you keep the remote control facing down, it is charged via the solar cell, allowing the battery to last longer.
- When charging the remote control is complete, “Complete” appears on the display. Then, remove the charging cable.
- If the remote control will not be used for an extended period of time, make sure to charge the remote control by using the USB port before storage.

NOTE

- The product does not come with a remote control charging cable or charger.

9. Troubleshooting

9-1 Items to be checked first

- 1 The input voltage should be rating voltage $\pm 10\%$ range. The air conditioner may not operate properly if the voltage is out of this range.
- 2 Is the line cable linking the indoor unit and the outdoor unit linked properly? The indoor unit and the outdoor unit shall be linked by 5 cables. Check the terminals if the indoor unit and outdoor unit are properly linked by the same number of cables. Otherwise the air conditioner may not operate properly.
- 3 When a problem occurs due to the contents illustrated in the table below it is a symptom not related to the malfunction of the air conditioner.

NO.	Operation of air conditioner	Explanation
1	The OPERATION indication LED(BLUE) blinks when a power plug of the indoor unit is plugged in for first time.	It indicates power is on. The LED stops blinking if the operation ON/OFF button on the remote control unit is pushed.
2	When turning off and on immediately or connecting the power right away, the compressor may not operate immediately in cooling mode. [In case of heat pump model] When turning off and on immediately or connecting the power right away, the compressor may not operate immediately in Heating mode.	In happens after a delay of 3 minutes when the compressor is reoperated. The same phenomenon occurs when a power is on. As a phenomenon that the compressor is reoperated after a delay of 3 minutes, in heating mode, the indoor fan speed may automatically adjust according to the discharge air temperature.
3	Fan speed setting is not allowed in DRY mode.	The speed of the indoor fan is set to Low Low in DRY mode. Fan speed is selected automatically in AUTO mode.
4	Compressor stops operation intermittently in Dry mode.	Compressor operation is controlled automatically in DRY mode depending on the room temperature and humidity.
5	Timer LED(ORANGE) of the indoor unit lights up and the air conditioner does not operate.	Timer is being activated and the unit is in ready mode. The unit operates normally if the timer operation is cancelled.
6	The compressor stops intermittently in a COOL mode or DRY mode, and fan speed of the indoor unit decreases.	The compressor stops intermittently or the fan speed of the indoor unit decreases to prevent inside/outside air frozen depending on the inside/outside air temperature.
7	[In case of heat pump model] Compressor of the outdoor unit is operating although it is turned off in a HEAT mode.	When the unit is turned off while de-ice is activated, the compressor continues operation for up to 9 minutes(maximum) until the deice is completed.
8	[In case of heat pump model] The compressor and indoor fan stop intermittently in HEAT mode.	The compressor and indoor fan stop intermittently if room temperature exceeds a set temperature in order to protect the compressor from overheated air in a HEAT mode.
9	[In case of heat pump model] Indoor fan and outdoor fan stop operation intermittently in a HEAT mode.	The compressor operates in a reverse cycle to remove exterior ice in a HEAT mode, and indoor fan and outdoor fan do not operate intermittently for within 20% of the total heater operation.

9-2 Communication Error

1. Checklist :

- 1) Is the IPM Shunt resistance value correct? Check if the resistor is open
- 2) Is the condition of surrounding temperature abnormal overload?
- 3) Is there any problem like the temperature sensor separation or measurement value error?
- 4) Is the interphase resistance of compressor normal?

2. Troubleshooting procedure

9-2-13 No power outdoor (Initial Diagnosis) (Not displayed)

1. Checklist :

- 1) Is input power normal?
- 2) Is AC power linked correctly? (L,N,E)
- 3) Is there a mis-wiring between communication wire and Power wire?
- 4) Is there a mis-wiring between Main PBA and SMPS PBA wire?
- 5) Is the input voltage of SMPS AC in Main PBA (BD151 #2~#3) normal?
- 6) Is the voltage of SMPS DC in Main PBA (CE161(15V), CE175(12V), CE174(5V), CE162(3.3V)) normal?

2. Troubleshooting procedure

9-2-14 When the Up/Down, Left/Right louver motor does not operate (Initial Diagnosis)(Not displayed)

1. Checklist :

- 1) Is the input power voltage normal?
- 2) Is the Up/Down louver motor properly connected with the connector? (CN800, CN801, CN810)

2. Troubleshooting procedure

9-2-15 When the remote control is not receiving

1. Checklist :

- 1) Check if the connector was normally assembled.
- 2) Check the battery in remote control
- 3) All the lights out and check again : Change electronic type of light like LED to fluorescent light that can't interfere with the infrared signal.
- 4) Put the set in operation and check the voltage of display PBA
- 5) Replace the display PBA

2. Troubleshooting procedure

9-2-16 Smart Install error

1. Checklist :

- 1) Check the leakage region.(Use leakage detection liquid or soapy water)
- 2) When leakage region is found from service valve and piping connection re nut part : After the related measures to check the refrigerant supplements and operation.
- 3) If the leakage region is pipe welding part : Weld leakage region after refrigerant gas release.(Brass parts should only apply)
- 4) If the leakage region is surface area (Heat exchanger or pipe welding region is not) : Replace parts.
- 5) Check the PBA Relay
 - Display of indoor unit : Ensure that the operating pilot lamp has been lighted.
 - Ensure that the Relay input voltage of indoor unit PBA is normal.(If the PBA is defective, replace)

2. When the air conditioner is in standby status, use the remote controller to start the Smart Install mode.

- 1) Press the [SET], [Mode], [Power] button simultaneously for 4 seconds.
 - Smart Install mode can be operated only with the supplied remote controller.
 - During the Smart install mode procedure, remote controller cannot be operated.

3. Troubleshooting procedure

9-2-17 EEV or VALVE CLOSE error (C422)

1. Checklist :

- 1) Is the connection of cable for the fan?
- 2) Is the fan wire is connected clockwise? U(RED)-V(WHT)-W(BLK)
- 3) Is the interphase resistance of fan normal?

2. Troubleshooting procedure

9-2-43 Diagnosis of Inverter PBA using HASS tool

- ※ HASS (Home Appliance Smart Service)
- 1. You can diagnose the status of the Inverter PBA
 - 1) In case of outdoor error (464, C478, C465, C489, C461, C446, C462), you can check whether the cause of error is the Inverter PBA, Compressor or fan motor.
 - 2) Select Diagnosis menu, and select Inverter PBA
 - If you select comp1, HASS will check problems with Inverter PBA for driving compressor.
 - If you select fan1, HASS will check problems with Inverter PBA for driving fan motor.

- 3) After diagnosis using HASS
 - If the Inverter PBA for driving fan motor is normal, it is necessary to check motor and motor wire connection
 - If the Inverter PBA for driving comp is normal, it is necessary to check comp and comp wire connection
 - If the Inverter PBA is failure, replace the Inverter PBA

[Pass]

[Need to check]

Result	Cause
PASS	▪ Inverter PBA Normal ▪ Compressor and wire connection, etc. need to be checked ▪ Fan motor and wire connection, etc. need to be checked
Need to Check	▪ Inverter PBA failure ▪ Inverter PBA replacement required
Need to Check	▪ Communication error ▪ Check E2P and check communication between indoor and outdoor
Need to Check	▪ Need to Manual check ▪ It is difficult to determine inverter PBA or comp. or motor defect
Not supported model	▪ It can be diagnosed from the model <u>produced in '21</u>

10. Block Diagram

10-1 Indoor unit

10-2 Outdoor unit

10-2-1 Pre-inspection Notices

- 1 Check if you pulled out the AC power plug when you remove the PCB or front panel.
- 2 Don't hold the PCB side and not use excessive force to remove the PCB.
- 3 Don't pull the lead wire but hold the whole housing to connect or disconnect a connector to the PCB.
- 4 In case of outdoor PCB disassembly, check first the complete discharge of condenser after 1 minute power off.

10-2-2 Inspection procedure

- 1 Check connector connection and peeling of PCB or bronze coating pattern when you think the PCB is broken.
- 2 The PCB is composed of 3 parts.
 - Indoor Main part : MICOM and surrounding circuit, relay, fan motor sensing and driving circuit, temperature sensing circuit power circuit of SMPS, buzzer circuit. Communication circuit.
 - Display part : LED lamp, Switch, Remote-control module.
 - Outdoor Main part : MICOM and surround circuit, fan motor sensing and driving circuit, compressor driving circuit power circuit of SMPS, PFC control circuit, 4way circuit, communication circuit, OPTION (EEV control circuit, temperature sensing circuit).

10-2-3 Indoor detailed inspection procedure

No.	Procedure	Inspection Method	Cause
1	Plug out and pull the PCB out of the control box Check the PCB fuse	1) Is 1st fuse disconnected?	• Over current • Indoor Fan motor short • AC part and pattern short of Indoor PBA
2	Supply power If the operating lamp twinkles at this time, the above 1)~3) have no relation	Check the power voltage	
		1) Is the BD100 input voltage 200Vac~240Vac?	• Power cord is faulty, Fuse open, Wrong Power cable Wiring, AC part is faulty
		2) Is the voltage CE100 or CE102 12Vdc?	• Switching Trans of Power circuit is faulty
		3) Is the voltage CE108 5Vdc?	• Power circuit is faulty, Load short
3	Press the ON/OFF button 1. Fan speed(high) 2. Continuous Operation	1) Is the voltage over AC 180V being imposed on terminal #3-#5 of fan motor connector (CN900)?	• Fan motor of the indoor is faulty
		2) The fan motor of the indoor unit doesn't run	• Fan motor connector(CN900) is faulty
		3) The power voltage between terminal #3-#5 of the connector(CN900) is 0V	• PBA is faulty

10-2-4 Outdoor detailed inspection procedure

No.	Procedure	Inspection Method	Cause
1	Plug out and pull the PCB out of the control box. Check the PCB fuse (Wait 3 minutes after power off)	1) Is 1st fuse disconnected?	- Over current - AC part and pattern short of Outdoor PBA
2	Check the Wiring	1) Is the Compressor wire connected clockwise? 2) Is the Reactor wire connected normally? 3) Is the Fan wire connected normally? 4) Is the 4way wire connected normally? 5) Is the sensor wire connected normally? 6) Is the EEV wire connected normally?	- Wrong assembly - Installation(service) condition is bad
3	"Supply power and operate the set (Use Remote-control, button in indoor set)"	Check the power voltage	
		1) Is the voltage between Terminal block L-N 200Vac~240Vac?	Power cord is faulty, Wrong Power cable Wiring
		2) Is the C006 voltage 200Vac~240Vac?	- Fuse open .L,N,F1,F2 wire wrong wiring (Terminal Block-PBA)
		3) Is the BD151 voltage 200Vac~240Vac?	- Power circuit is faulty - Load short
		4) Is the BD051(#2-#3) voltage 200Vac~240Vac after 3 minutes later?	- Fuse open - L,N,F1,F2 wire wrong wiring (Terminal Block-PBA) .PT020 open .RY021, RY022 is faulty - Outdoor Micom(MIC200) error
		5) Is the CE101 voltage 280Vdc~320dc after 3 minutes later?	- BD051 is faulty - Power circuit is faulty, Load short
		6) Is the voltage CE161 voltage 15Vdc?	- Switching Trans of Power circuit is faulty - Load short
		7) Is the voltage CE175 voltage 12Vdc?	- Switching Trans of Power circuit is faulty - Load short
		8) Is the voltage CE174 voltage 5Vdc?	- Switching Trans of Power circuit is faulty - Load short
4	Check the LED lamp display	1) Normal : RED on, GRN blink, YEL off 2) Abnormal - All o check no power - abnormal display : check error mode	- F1,F2 wire wrong wiring - Outdoor PBA is faulty

11. Reference Sheet

11-1 Low Refrigerant Pressure Distribution

Note : Please measure the refrigerant pressure after the air conditioner operates on testing cooling mode for more than 10 minutes.

- **Indoor Temp. Variation :** 20°C ~ 32°C
- **Outdoor Temp. Variation :** -5°C ~ 45°C

11-3 Q & A for Non-trouble

Classification	Class	Description
Cooling	Q	The cooling is weak.
	A	When it is hot outside, its cooling capacity decreases due to the increase in the ambient temperature. When the dust filter gets blocked or warm outside air gets in, the cooling capacity will decrease. So, make sure to clean the dust filter frequently, prevent heat loss by closing the doors and insulate the cooling area by using curtains, blinds, shades or window tinting.
	Q	The cooling is good generally. But, it gets weak when it is considerably hot.
	A	It occurs when the outdoor unit is exposed to direct sun light and heat-up air is not ventilated well. So, set up a sunblind over the outdoor unit and keep sunlight away from the unit to increase the ventilation. When the cooling capacity decreases during a heat wave, clean the heat exchanger of the outdoor unit or spray some cold water to the heat exchanger to increase the cooling capability.
	Q	The cooling is weak. Does it need refrigerant charging?
	A	It is not correct to charge refrigerant regularly. Except when you have moved several times or the connection pipes are broken, the refrigerant does not run low. So, when refrigerant is additionally charged, it could be costly and cause a product's failure. When the refrigerant leaks, all of it will escape in a short time resulting in cooling failure and no water coming out of the drain hose. So, When water comes out of drain hose it means that the HX is getting cold enough to be below dew point, but it's still possible for the unit to be undercharged, leaking or being installed with too long pipes.
	Q	It fails to do cooling.
	A	When the air conditioner is set to ventilation or the desired temperature is set higher than the current temperature, it fails to do cooling. In this case, select cooling or set the desired temperature lower.
Leakage	Q	Water drips from the indoor unit.
	A	Place the drain hose properly. When it is not placed properly, the drain water would flow back flooding the floor. So, straighten out the drain hose for the water to be drained well.
	Q	Water drips at the drain connection (service valve) of the outdoor unit.
	A	When a glass bottle is taken out of the refrigerator, moisture gets condensed on its surface due to the temperature difference. The same principle applies to the air conditioner. When cold refrigerant goes through the copper tube, moisture gets condensed on the surface of the tube and the connection areas. To prevent the water condensation, the pipes are insulated. But, the connection areas of the outdoor unit are not insulated for the purpose of maintenance or repair, and water gets condensed due to the temperature difference and drips down. Generally, it evaporates right away. But, when it drips a lot during muggy days, put a water pan on the floor.
	Q	It leaks even though a drain pump is used.
	A	It occurs when the drain pump is plugged out or it is out of order. Check the power of the drain pump and the position of the drain hose, and when the pump is faulty, contact the drain pump manufacturer. Samsung Electronics does not manufacture drain pumps. So, we are not able to correct the drain pump problems.
Smells	Q	Whenever the air conditioner is turned on, it irritates my eyes and gives me a headache.
	A	There are no components in the air conditioner irritating the eyes and sending out chemical smells. But, when the air conditioner is turned on, other smell sources are sucked into the air conditioner and get out of it. So find and root out the smell sources. Generally, it occurs at a interior renovated place, a pharmacy, a gasoline handling place, a tire shop, a second-hand book shop or an electronic component handling place, when its chemical or musty smells are sucked in and sent out, it can be misled that the air conditioner generates them.

Classification	Class	Description
Smells	Q	Whenever the air conditioner is turned on, it stinks.
	A	When there is no in the air conditioner sending out chemical smells. But, when the air conditioner is turned on, other smell sources are sucked into the air conditioner and get out of it. So, find and root out the smell sources. Generally, when the drain hose is taken out to the washing room or there are sources of smells such as a diaper bin, a shoe shelf or a socks bin, bad smells generate. Also, it occurs where glass cleaners or air fresheners are used; when they are sucked in interacting with dusts and moistures inside, bad smells generate. these kinds of organic materials are noxious to human bodies. So, we recommend against the use of them.
	Q	Whenever the air conditioner is turned on, it smells sour.
	A	When the room is papered recently, the wallpaper glue scent would be sucked inside. Also, when the air conditioner is installed in the study room of young boys or girls who love sweat generating activities such as basketball, excessive sweats evaporate and get sucked into the air conditioner resulting in bad smells. So, find and root out problem or refresh the room frequently.
	Q	Whenever the air conditioner is turned on, it smells musty.
	A	It is due to the improper keeping of the product after its use. When keeping the product, dry up the inside with the operation of ventilation to prevent must. When the product is kept without drying up the inside with ventilation, mold would grow inside resulting in must. So, open the windows and switch on the ventilation function to get rid of the saturated smell inside.
	Q	Whenever the air conditioner is turned on, it sends out bad smells such as stale smells.
	A	It occurs generally when there are pet animals in the house. Their smells stay at the same place. But, when the air conditioner is turned on, the air gets circulated resulting in the circulation of the smells. So, find and root out the problem or refresh the room frequently.
	Q	It sends out bad smells.
Operation	A	When the air filter is filthy, it could send out bad smells. So, clean the filter and ventilate the room with the windows open while operating the ventilation function.
	Q	It won't start.
	A	There is a power failure or it is plugged out. Also, check if the power distribution panel is switched off.
	Q	It goes off during operation.
	A	When the hot air does not escape properly, it goes off during operation. it occurs when it does not ventilate properly because the outdoor unit is covered, the back of the outdoor unit is blocked by a cardboard or a plywood panel, and the front of the outdoor unit is blocked by the closed window or other obstacles. Clear the above obstacles from the outdoor unit.
	Q	It generally works properly. But, when it's considerably hot, it goes off during operation.
	A	It occurs when the outdoor unit is exposed to direct sunlight and the hot air does not escape properly. Set up a sun blind over the outdoor unit and clear the neighboring obstacles from the outdoor unit to provide good ventilation. When it goes off frequently during a heat wave, it would prevent the turn on and increase the cooling capacity cleaning the outdoor unit or spraying some water to the heat exchanger.
	Q	The remote controller won't operate.
	A	When the batteries run out or the transmitter or receiver of the remote controller is blocked by obstacles, change the batteries or keep the obstacles away from the controlling area. Also, the remote controller may not work under intensive light from a 3-wave length lamp or a neon sign due to the EMI. In this case, take the remote controller closer to the receiver.

Classification	Class	Description
	Q	Who installs the air conditioner? (Relocation/Re-installation)
	A	When relocating or re-installing the air conditioner, make sure to contact Samsung Electronics Service Center or Authorized Service Agent and have them to do the job. (If not, it could cause personal injury or product damage.) The cost for the relocation/re-installation of the air conditioner is subject to the customer's expense. There is a cost table. But, our service engineer needs to visit to total up the cost correctly. When you move in, make sure to contact Samsung Electronics Service Center or Authorized Service Agent in advance to streamline the process.
	Q	Is it possible to install the outdoor unit outside?
	A	It is permissible to install this system at a specified area within the residential premises or on the adjacent rooftop. Nevertheless, depending on local regulations, affixing an angled steel enclosure housing the external apparatus externally onto the residence might be unlawful. Moreover, positioning said external mechanism outdoors so as to impede pedestrian traffic would likewise contravene legal standards.
	Q	What can be done to install the outdoor unit facing the road because it is a commercial building?
	A	The following is an excerpt from building code going into effect from JUNE 1 st 2005. "The exhaust pipe of a cooling or ventilation facility installed in a building adjacent to the streets of commercial or residential areas shall be installed higher than 2 m to prevent the exhaust air from blowing directly to passersby and the current facilities shall be corrected by MAY 31 st 2005." So, please install it higher than 2 m or not to blow the hot exhausting air directly to passers-by.
	Q	What about installing a windscreen during installation not to blow hot air directly to passers-by?
	A	When the hot air from the front of the outdoor unit is blocked, the product's performance will be affected and it will fail to operate properly. So, keep it at least 300mm away from its surrounding walls and give it good ventilation.

11-4 Cleaning /Filter Change

Auto clean function

Use the Auto clean function if the indoor unit produces odors.

Activating Auto clean

To activate Auto clean, press the  (Options) button for at least 3 seconds.
The indoor unit display shows:

If the air conditioner is off, Auto clean starts immediately. If the air conditioner is running, Auto clean starts as soon as the air conditioner turns off.

NOTE

- You can also activate Auto clean from the Options menu:

- Once Auto clean is selected, it is always activated whenever the air conditioner turns off.
- Auto clean runs for 10 to up to 30 minutes depending on internal dry conditions. The indoor unit display shows the cleaning progress from 1% to 99%.
- If you start another function while Auto clean is progressing, Auto clean pauses and will resume when the other function stops.
- When Auto clean completes, the air conditioner turns off.

Canceling Auto clean

To cancel Auto clean while it is running, follow the procedure below:

or

NOTE

- Canceling Auto clean does not deactivate it.

Deactivating Auto clean

To deactivate Auto clean, follow the procedure below while the air conditioner is in operation :

or

Cleaning the outside of the indoor unit

- 1 Turn off the air conditioner and wait until the fan stops.
- 2 Disconnect the power supply.
- 3 Use a soft brush or Lukewarm damp cloth to clean the exterior.

⚠ WARNING

- Do not clean the appliance by spraying water directly onto it. Water entering the unit may result in electric shock or fire that could cause death, serious injury, or property damage:

⚠ CAUTION

- Do not use an alkaline detergent to clean the indoor unit display.
- Do not use sulphuric acid, hydrochloric acid, or organic solvents such as paint thinner, kerosene, acetone, benzene, or alcohol to clean the unit surfaces.

Cleaning the heat exchanger on the outdoor unit

- 1 Turn off the air conditioner and wait until the fan stops.
- 2 Disconnect the power supply.
- 3 Spray water on the heat exchanger to remove dust and other debris.

⚠ CAUTION

- Do not use sulphuric acid, hydrochloric acid, or organic solvents such as paint thinner, kerosene, acetone, benzene, or alcohol to clean the unit surfaces.
- If you need to inspect or clean the inside of the heat exchanger on the outdoor unit, contact a local service centre for help.

Cleaning the filter

Clean the air filter every two weeks or when the  (filter-cleaning reminder) appears on the indoor unit display. The time between cleanings may vary, depending on the usage and environmental conditions.

-
- 1 Slide the filter off of the unit.
 - 2 Use a soft brush or vacuum cleaner to remove any dust or debris on the filter.
 - 3 Soak the filter in a solution of water and mild detergent for 30 minutes.
 - 4 Rinse the filter and let it air dry in a well-ventilated area that is out of direct sunlight.
 - 5 Reinstall the filter.
 - 6 Reset the filter-cleaning reminder:

⚠ CAUTION

- Take care not to damage the filter during cleaning.
- Do not scrub the air filter with a hard-bristle brush or another cleaning utensil.
- Do not expose the air filter to direct sunlight when drying it.

11-5 Installation

11-5-1 Before Installation

Keep the air conditioner outlet and inlet free from its surroundings. In case of installation, keep the symmetry and fix it to prevent vibration. The pipe length shall meet the standard as far as possible.

11-5-2 Installation Procedure

■ Location

Install the product in an area to guarantee the best cooling effect, convenience of piping and electric work, and inexistence of vibration or wind.

■ Wall Drilling

Drill the wall downward in a diameter of 60 to 65mm.

■ Fixing Indoor Unit & Outdoor Unit

Fix the air conditioner indoor unit securely to the wall. Secure the outdoor unit in a suitable position.

■ Pipe Spooling & Connecting

You shall cut the pipe with a pipe cutter and grind all the burrs of the cut surface. pipe expansion may continue until the pipe surface becomes uneven or torn apart. Be sure to use a torque wrench to tighten pipes or are nuts.

<Torque & Depth>

Outer Diameter (D)	Torque(kgf-cm)	Depth(A)
ø6.35 mm(1/4")	140~170	1.3 mm
ø9.52 mm(3/8")	250~280	1.8 mm
ø12.70 mm(1/2")	380~420	2.0 mm
ø15.88 mm(5/8")	440~480	2.2 mm
ø19.05 mm(4/4")	990~1,210	2.2 mm

■ Leak Test

Put an inset gas like nitrogen in the outdoor unit pipe and put soap bubbles or other test liquids on the pipe surface for the leak test.

■ Drain Hose Connecting

Install the drain hose downward to drain water naturally. Be sure to pour water into the hose to check if it drains well.

■ Electric & Earth Work

Electric and earth work shall meet the "Electric Facility Technology Standard" and the "Internal Wire Regulation" of the Electric Business Laws.

■ Inspection & Trial Run

Upon completion of the tests, you shall make a trial run while you explain the main functions of the air conditioner to finish the installation.

11-6 Installation Diagram of Indoor Unit and Outdoor Unit

11-6-1 Air-Purge Procedure

- 1) Connect each assembly pipe to the appropriate valve on the outdoor unit and tighten the flare nut.

- 2) Connect the charging hose of low pressure side of manifold gauge to the packed valve having a service port (3/8" Packed valve) as shown at the figure.

- 3) Open the valve of the low pressure side of manifold gauge counter-clockwise.

- 4) Purge the air from the system using vacuum pump for about 30 minutes.
 - After that, please recheck that pressure is stabilized.
 - Close the valve of the low pressure side of manifold gauge clockwise.
 - Remove the hose of the low pressure side of manifold gauge.

- 5) Set valve cork of both liquid side and gas side of packed valve to the open position.

- 6) Mount the valve stem nuts to the 2 way and 3 way valve. And mount the service port cap to 3 way valve.

- 7) Check for gas leakage.
 - At this time, especially check for gas leakage from the 3 way valve's stem nuts, and from the service port cap.

11-6-2 "Pump down" Procedure

Pump down will be carried out when an evaporator is replaced or when the unit is relocated in another area.

- 1) Remove the caps from the 3 way valve and the 3 way valve.

- 2) Turn the 3 way valve clockwise to close and connect a pressure gauge (low pressure side) to the service valve, and open the 3 way valve again.

- 3) Set the unit to cool operation mode.
(Check if the compressor is operating.)

- 4) Turn the 3 way valve clockwise to close.

- 5) When the pressure gauge indicates "0" turn the 3 way valve clockwise to close.

- 6) Stop operation of the air conditioner.

- 7) Close the cap of each valve.

Remarks

Relocation of the air conditioner

- Refer to this procedure when the unit is relocated.
- Carry out the pump down procedure (refer to the details of 'pump down').
- Remove the power cord.
- Disconnect the assembly cable from the indoor and outdoor units.
- Remove the flare nut connecting the indoor unit and the pipe.
- At this time, cover the pipe of the indoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
- Disconnect the pipe connected to the outdoor unit.
At this time, cover the valve of the outdoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
- Make sure you do not bend the connection pipes in the middle and store together with the cables.
- Move the indoor and outdoor units to a new location.
- Remove the mounting plate for the indoor unit and move it to a new location.
