The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

| Company information                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

System diagram

|       |                               |                                                                                                                                                                                               |
|-------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A1    | Raw material supply           | This module considers the extraction and processing of all raw materials, energy, and transportation which occur upstream to the studied manufacturing process, including packaging material. |
| A2    | Transport to the manufacturer | The raw materials are transported to the manufacturing site.                                                                                                                                  |
| A3    | Manufacturing*                | This module includes all resources used to produce and waste produced. This also includes additives and packaging material.                                                                   |
| A4    | Transport                     | Transportation from the manufacturing site to distribution centre and then from the distribution centre to the building site is included.                                                     |
|       | Transport Scenario            | truck: 350km                                                                                                                                                                                  |
| A5    | Construction installation     | This stage is not declared, except for the GWP-biogenic arising from packaging that leaves the system boundary, which is balanced in this module.                                             |
| B1-B7 | Use stage                     | This stage is not declared.                                                                                                                                                                   |
| C1    | Deconstruction/Demolition     | This stage includes the de-construction and/or demolition of the building. This is not relevant as the product included in this study is not used in the construction process.                |
| C2    | Transport                     | This stage represents the transport distance to the waste processing facility.                                                                                                                |
| C3    | Waste processing              | This stage includes any waste treatment needed.                                                                                                                                               |
|       | EOL Scenario                  | Landfill 5.19%. Incineration 22.50%. Recycling 72.30%.                                                                                                                                        |
| C4    | Final disposal                | This includes any material that is landfilled.                                                                                                                                                |
| D     | Benefits                      | Emission credits obtained from energy recovery and/or recycling materials                                                                                                                     |

The products are manufactured according to EU regulations and international standards. This is consistent throughout the entire process, which includes casting/forging, machining, assembly, surface treatments and QC

ND – Not Declared; X – Declared

Reading example: 9,0E-03 =  $9,0 \cdot 10^{-3}$  = 0,009

Disclaimer: The results presented for modules A1-A3 alone shall not be used for comparisons unless all relevant life cycle stages, particularly end-of-life (C1-C4), are included. This ensures a more accurate and representative assessment of the environmental impact over the full product life cycle.

Cut-off criteria: The following procedures were followed for the exclusion of inputs and outputs. - All input and output flows in a unit process were considered, i.e., considering the value of all flows in the unit process and the corresponding LCI where data were available. - Data gaps were filled by conservative assumptions with average or generic data. Any assumptions in such cases were documented. - The use of cut-off criterion on mass inputs and primary energy at the unit process level (1 %) and at the information module level (5 %). - All hazardous and toxic materials and substances are included in the inventory, and the cut-off rules do not apply.

## Content Information

| Product Components | Weight, kg | Post-consumer material, weight-% | Biogenic material, mass-% of product | Biogenic material, kg C / declared unit |

\* The results in kg PO<sub>4</sub> eq. can be obtained by multiplying the results in kg P eq. by a factor of 3,07.

\*\* The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

| Acronyms                          | GWP-GHG global warming potential - greenhouse gases |         |         |         |         |         |         |         |          |

The GWP GHG indicator is identical to GWP-total except that the characterisation factor ( CF) for biogenic CO2 is set to zero. This means that the uptake and emissions of biogenic CO2 are “balanced out” already in modules A1 A3, instead of in modules A1 A5 (for packaging) or modules A C (for product). In the context of Norwegian public procurement legislation, GWP GHG is also referred to as GWP IOBC.

# Additional information

## Additional Environmental Information

See the PCR and sections 5.4, 7.3 and 7.4 in EN 15804.

An EPD may include additional environmental information, in addition to the LCA results of the section on environmental performance results. The additional environmental information may cover various aspects of specific relevance for the product, for example:

- instruction for proper use of the product, e.g. to minimise the energy or water consumption or to improve the durability of the product;
- instructions for proper maintenance and service of the product;
- information on key parts of the product determining its durability;
- information on recycling including e.g. suitable procedures for recycling the entire product or selected parts and the potential environmental benefits gained;
- information on a suitable method of reuse of the product (or parts of the products) and procedures for disposal as waste at the end of its life cycle,
- information regarding disposal of the product or inherent materials, and any other information considered necessary to minimise the product's end-of-life impacts,
- information on permanent (more than 100 years) storage of biogenic carbon, either in the product, in a landfill, or as a consequence of applying carbon capture and storage (CCS) to the incineration of biogenic carbon, and how this would influence GWP-biogenic results if the GWP-biogenic indicator would allow consideration of such storage (it currently does not according to EN 15804; in case of such storage a virtual emission of biogenic CO<sub>2</sub> has to be added, see Annex 2)
- a more detailed description of an organisation's overall environmental work such as:
  - the existence of a quality or environmental management system or any type of organised environmental activity, and
  - information on where interested parties may find more details about the organisation's environmental work.

Additional environmental information can also include information on carbon offset, carbon storage and delayed emissions, or on release of dangerous substances to indoor air, soil and water during the use stage.

## Additional social and economic information

The EPD may also include other relevant social and economic information as additional and voluntary information. This may be product information or a description of an organisation's overall work on social or economic sustainability, such as activities related to supply chain management or social responsibility.

Any additional social and economic information declared shall be substantiated and verifiable, and be derived using appropriate methods and be specific, accurate, not misleading, and relevant to the specific product. Quantitative information is preferred over qualitative information.

|                                                                                                                                                                                                                                                                                                  | Abiotic depletion potential for fossil resources (ADP-fossil)                                       | 1          |
|                                                                                                                                                                                                                                                                                                  | Water (user) deprivation potential, deprivation-weighted water consumption (WDP)                    | 1          |
| Disclaimer 1 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.                                                                                                   |                                                                                                     |            |
| Note 1: The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins, and/or risks.                                                                                                       |                                                                                                     |            |
| Note 2: The results presented for modules A1–A3 alone shall not be used for comparisons unless all relevant life cycle stages, particularly end-of-life (C1–C4), are included. This ensures a more accurate and representative environmental impact assessment over the full product life cycle. |                                                                                                     |            |
