TO WHOM IT MAY CONCERN

REACH DECLARATION

In accordance with Article 33 of the REACH Regulation, and with reference to our previous communications, we inform you that the components made of bronze and brass alloy present in the products supplied by us contain lead as an alloying element in quantities exceeding the threshold of 0.1% by weight. Lead has been included in the list of SVHC substances candidate for the authorisation process, in the update published by the European Chemical Agency ECHA on 27 June 2018.

Lead was inserted with the following information:

Substance	CAS/EC	List	Date of Inclusion
Lead	CAS: 7439-92-1 EC: 231-100-4	SVHC	27 June 2018

Since lead is present as an alloying element, no exposure is expected, no further information on the safe use of the product supplied by us is therefore necessary.

The list is available at the following link: <https://echa.europa.eu/it/candidate-list-table> and being a list in continuous updating, we declare the constant monitoring of the possible inclusion of new substances in the list and the timely information to our customers in the event that these substances were contained in the products supplied by us. This information can be found on our website in the technical characteristics section of each product.

In witness thereof,

Mr. Tiziano Guidetti

Research & Development Manager
