

drylin® sliding plates

RSDJ-40-06

drylin® sliding plates

- Made from the high-performance plastic iglidur® J
- Low coefficient of friction
- Screw through the reinforced hole in the middle for a firm hold

Product description

Discover the drylin® sliding plates, expertly crafted from high-performance iglidur® J plastic. These versatile gliding pads are designed to move heavy loads effortlessly over various surfaces, including steel, aluminum, and stainless steel, all without the need for additional lubrication. Their low friction ensures smooth operation, while the reinforced hole in the center allows for secure attachment with a screw. Ideal for a wide range of applications, these plates deliver reliability and performance you can trust.

General properties

Weight	12.574 g
Wear limit	1.5 mm

Dimensions

Outer Ø Da	40 mm
Width s	6 mm
K for countersunk screw	M6

Certificates and standards
