

Solvent Pass-Through Check Valve, Factory Installed, Stainless Steel - 25969

Product Images

Short Description

- Includes safety check valve to prevent backflow
- Use to dispense liquid into or dispense liquid out of the cabinet

- All stainless-steel construction
- Factory installed and FM-Approved with purchased safety cabinet

Description

The Pass-through Check Valve (model 25969) can be used on the sides or back of flammable liquid safety cabinets. This unique system provides a means to dispense solvent through the wall of a cabinet. It can be installed either to dispense liquid into or dispense liquid out of the cabinet. Two ¼-in NPT threaded fittings (not included) are required to thread into both sides of the pass-through. Only install on the sides and back of the safety cabinet, never on the doors, bottom or top of a cabinet.

Factory installed—must be ordered with cabinet.

Note: This [TechTALK](#) has guidelines for ordering factory-installed pass-through valves for Justrite safety cabinets to maintain FM approval and our 10-year warranty.
