

Single Stainless Steel Joining Clip for Connecting EcoPolyBlend™ Accumulation Centers - 28925

Product Images

Short Description

- Unites 4-drum (and smaller) spill containment pallets or accumulation centers to reach needed sump capacity
- Meets EPA requirements when sump capacities reach 71 gal (270 L)

- Can be used in tandem with Justrite Sump-to-Sump™ Drain Kits for EcoPolyBlend™ Accumulation Centers
- Made from extra durable, eco-friendly stainless steel
- Simple, easy to use design ensures proper usage — and proper results

Description

The Single Stainless Steel Joining Clip for connecting EcoPolyBlend™ Accumulation Centers (one clip — model 28925) allow you to increase sump capacity for accumulation centers by joining 4-drum and smaller units together. Use in applications that require a continuous sump.

This tough stainless steel clip measures 4 in x 2 in (102 mm x 51 mm) and can be used in tandem with [Justrite Sump-to-Sump Drain Kits](#) to ensure pallets and accumulation centers are connected safely and securely.

With a net weight of only 0.4 lb (0.2 kg), our joining clips allow you to easily create a scalable, modular network of spill control pallets and accumulation centers that you can increase or decrease depending on your spill containment needs.

Why do you need it??

When it comes to spill containment in the workplace, it is essential to have the right equipment to ensure leaks and spills do not get out into the environment. Implementing spill control pallets and accumulation centers is important, but if you do not have enough sump capacity it can result in not properly containing incidental leaks and spills. In addition, if you are using 4-drum and smaller accumulation centers in the workplace, you need to join them together for a minimum sump capacity of 71 gal (270 L) in order to meet full EPA compliance and other regulations.

Using a joining clip helps solve both of these issues, allowing you to create a modular network of spill containment pallets and accumulation centers, while also ensuring full compliance with regulations when the connected sump capacity reaches 71 gal (270 L).

In addition to adhering to compliance, it is important to keep pallets and centers clipped for safety reasons. There are many things that can happen in a workplace — even something as simple as bumping unclipped accumulation centers could result in an unnecessary or hazardous spill.

Specifications

Model No	28925
UPC	697841063044
Brand	Justrite
Color	Silver
Material Specifications	Stainless Steel
EPA Compliance	Yes
Dimensions, Exterior	5"W x 7"L x 4"H
Net Weight, lbs	0.2
